SUMMARY

Security Analyst who is committed to delivering value and strengthening security for a safer digital environment. Hands-on experience in SIEM monitoring, IDS/IPS, SOAR automation, and Active Directory security. Skilled in threat detection, incident triage, phishing analysis, and vulnerability assessment. Strong understanding of enterprise security workflows with practical lab experience using Wazuh, Suricata, ELK, and Shuffle SOAR.

SKILLS

- SOC & SIEM Tools: Wazuh, Splunk, ELK, Shuffle SOAR, Suricata
- Cybersecurity Skills: Alert triage, threat detection, phishing analysis, event correlation, incident response
- Active Directory
- Pentesting & Security Analysis: Burp Suite, Nmap, MobSF, JADX, APKTool, Kali Linux
- Networking & Analysis: TCP/IP, DNS, Ports/Protocols, Wireshark
- Cloud: Amazon Web Services, Azure
- Programming/Scripting: Python, Docker, Bash

EXPERIENCE

Cybersecurity Trainee, Brototype	2024 - Present
• Engineered a SOC home lab using Wazuh SIEM, Suricata IDS, and Shuffle SOAR to simulate enterprise-grade monitoring and automate alert triage and incident response workflows, handling multiple scenarios weekly. • Deployed a comprehensive Active Directory lab with Domain Controller, DNS, and GPOs, analyzing authentication logs and simulating different attack paths to strengthen IAM and threat detection skills. • Performed vulnerability scans and penetration testing on intentionally vulnerable machines using tools like Nmap and Burp Suite to understand common security flaws and exploit techniques • Analyzed Android applications using MobSF, JADX, and APKTool, uncovering insecure data storage and weak encryption practices through static analysis and reverse engineering. • Python automation and bash automation scripting • Studied core concepts in cloud architecture, identity management, and cloud security best practices.	

PROJECTS

SOC Home Lab Project
• Built a personal SOC environment using Wazuh (SIEM), Suricata (IDS/IPS), and Shuffle (SOAR) to simulate enterprise-style monitoring, alerting, and automated incident response workflows. • Created custom Wazuh rules to detect SSH brute-force attacks and validated detections through log analysis and attacker behavior mapping. • Handled 15–20 alert triage scenarios weekly in home SOC lab. • Developed custom detection rules reducing false positives by 30% and improving alert quality. • Tools: Wazuh, Suricata, Shuffle SOAR,
Active Directory Lab
• Built a functional AD environment to understand real-world enterprise identity and access management. • Configured Domain Controller, DNS, user accounts, groups, and Group Policy to simulate organizational workflows. • Developed a PowerShell script to automate the creation of new user accounts in the Active Directory lab, improving efficiency and reducing the time spent on user provisioning tasks by 75%. • Tools: Windows Server, PowerShell, ADUC, Group Policy

EDUCATION

Bachelor of Computer Application, University of Calicut	2021 - 2024
